## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 and 11-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Sandbach (6369804).

Sandbach (6369804) teaches the sensor as claimed including a first knitted conductive textile plane (102), a second conductive textile plane (103), and an intermediate separating plane (104) penetrable by the first knitted conductive textile plane to allow the first conductive textile plane and the second conductive textile plane to make electrical contact under a mechanical interaction; the intermediate separating plane defines the structural perimeter of each of a plurality of apertures (411) from which the first knitted conductive textile plane deforms towards the second conductive textile plane under a mechanical interaction; wherein the first knitted conductive textile plane has conductive yarn knitted to form a repeating pattern of stitches each comprising a stitch looping portion SLP having a looping portion footprint LPF, the separating plane defines apertures A having an aperture footprint AF, and at least one looping portion footprint LPF is wholly containable within at least one aperture footprint AF.

Claims 7-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
